E-week 1 (30Dec18- 05Jan19)	E-week 2 (06-12Jan19)	E-week 3 (13-19Jan19)	E-week 4 (20-26Jan19)	E-week 5 (27Jan- 02Feb19)	E-week 6 (03-09Feb19)
207	245	216	222	183	140

*Compiled by Communicable Diseases Division, Ministry of Health*

140 dengue cases were reported in the week ending 9 February 2019, 43 cases fewer than in the previous week. NEA's Gravitrap surveillance system has detected about 40 per cent more *Aedes aegypti* mosquitoes in December 2018, compared to that in December 2017. If not reduced the high *Aedes aegypti* mosquito population may lead to a surge in dengue cases in 2019. To prevent dengue cases from increasing, NEA urges all members of the public and stakeholders to stay vigilant, and work together as a community to stem dengue transmission.

As of 11 February 2019, there were 32 active dengue clusters, with the largest located at Bedok Reservoir Rd (Blk 122, 124, 125, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 144,

145, 146, 147, 148, 149, 150, 151, 608, 609, 613, 613A, 613B, 615, 622, 623, 624, 626, 627, 628, 629, 631, 632) / Jln Damai (Blk 670) / Jln Tenaga (Blk 654) / Kaki Bt Ave 1. While NEA continues with inspections at the cluster areas, everyone needs to remove stagnant water from our environment, to deprive the mosquitoes of their breeding habitats.

Source eradication of mosquito breeding habitats and spraying of insecticides to control the adult mosquito population remain key to dengue prevention. NEA, together with the various agencies and other stakeholders represented on the Inter-Agency Dengue Task Force (IADTF), including Town Councils, have been checking and ridding our public areas and housing estates of potential mosquito breeding habitats.

NEA encourages all residents and stakeholders to play their part to help stem dengue transmission, by doing the 5-step Mozzie Wipeout as follows:

- Turn the pail
- Tip the vase
- Flip the flowerpot plate
- Loosen the hardened soil
- Clear the roof gutter and place Bti insecticide inside

Persons infected with dengue should protect themselves from mosquito bites by applying repellent regularly. If you are unwell and showing symptoms suggestive of dengue, you are advised to seek medical attention early.

The symptoms of dengue include:

- Sudden onset of fever for two to seven days
- Severe headache with retro-orbital (behind the eye) pain
- Joint and muscle pain
- Skin rashes
- Nausea and vomiting
- Bleeding from the nose or gums
- Easy bruising in the skin

All of us, including residents, contractors, and business owners, have a part to play in preventing dengue. The latest updates can also be found on the NEA website, Stop Dengue Now Facebook page or myENV app.
