## Dengue Cases

*It is important to note that the day-to-day numbers fluctuate, as they depend on the number of cases notified each day. Therefore, weekly numbers are a better reflection of actual trends.*

### Number of Reported Cases

21-Nov	22-Nov	23-Nov	24-Nov	25-Nov	26-Nov	27-Nov at 3pm
22	21	55	50	48	29	20

### Number of Reported Cases by E-week (from Sun 0000hrs to Sat 2359hrs)

E-week 42 (11-17Oct20)	E-week 43 (18-24Oct20)	E-week 44 (25-31Oct20)	E-week 45 (01-07Nov20)	E-week 46 (08-14Nov20)	E-week 47 (15-21Nov20)
592	565	440	408	355	259

Cumulative No. of cases for 2020 (First 47 E-weeks): 33956
------------------------------------------------------------

Compiled by Communicable Diseases Division, Ministry of Health

259 dengue cases were reported in the week ending 21 November 2020, 96 dengue cases fewer than in the previous week. The cumulative number of dengue cases for this year (as of 24 November 2020) stands at more than 34,000. With the concerted efforts of the Inter-Agency Dengue Task Force (IADTF) members, stakeholders and community, the weekly number of reported dengue cases is about 6 times lower than the peak of 1,792 seen in July this year, and the lowest weekly number in 2020 thus far. Nonetheless, the weekly number of dengue cases remains high, at about one-and-a-half times more than the number of cases seen in the corresponding period averaged over the last three years. The adult *Aedes aegypti* mosquito population detected from the National Environment Agency (NEA)'s Gravitrap surveillance system also remains high in some areas of Singapore.

It is critical that stakeholders and the public continue to work together with NEA, to arrest the high *Aedes aegypti* mosquito population in the community and break disease transmission. Residents, especially those residing in dengue cluster areas, should do their part and carry out the three protective actions against dengue.

The protective actions against dengue: 'Spray, Apply, Wear' or 'SAW' in short
