Dengue Clusters

(Map data is updated at 1am. Kindly clear your internet browser cache after each visit, in order to view the latest information.)

Operationally, a dengue cluster indicates a locality with active transmission where intervention is targeted. It is formed when two or more cases have onset within 14 days and are located within 150m of each other (based on residential and workplace addresses as well as movement history). The clusters are categorised according to their current status. There are 3 alert levels:

| Definition | Alert Level |
|---|-------------|
| High-risk area with 10 or more cases | Red |
| High-risk area with less than 10 cases | Yellow |
| No new cases, under surveillance for the next 21 days | Green |

Each cluster map illustrates the extent of NEA's current vector control intervention. Please click on the cluster location to view the respective map.

The information provided in this listing is accurate as at 18 May 2018

| S/N | Alert Level | Locality | Cases with onset in last 2 weeks | Cases since start of cluster | Breakdown | |
|-----|-------------|--|----------------------------------|------------------------------|---------------------------------|--------------|
| | | | | | Location | No. of cases |
| 1 | | Jurong West St 91 (Blk 933, 934, 938, 939, 940, 942, 943, 944, 945, 946, 947, 948, 949, 950, 952) / Jurong West St 92 (Blk 920, 925, 928) / Jurong West St 93 (Blk 966) (/images/default-source/publichealth/dengue/20180518/20980025.jpg) | 9 | 81 | Jurong West Street 91 (Blk 933) | 5 |
