Dengue Cases

It is important to note that the day-to-day numbers fluctuate, as they depend on the number of cases notified each day. Therefore, weekly numbers are a better reflection of actual trends.

Number of Reported Cases

07-Dec	08-Dec	09-Dec	10-Dec	11-Dec	12-Dec	13-Dec at 3pm
30	25	45	50	37	33	17

Number of Reported Cases by E-week (from Sun 0000hrs to Sat 2359hrs)

E-week 44 (27Oct-02Nov19)	E-week 45 (03-09Nov19)	E-week 46 (10-16Nov19)	E-week 47 (17-23Nov19)	E-week 48 (24-30Nov19)	E-week 49 (01-07Dec19)
308	322	373	330	295	282

Cumulative No. of cases for 2019 (First 49 E-weeks): 15230

Compiled by Communicable Diseases Division, Ministry of Health

As of 7 December 2019, the total number of reported dengue cases is 15,230. As of 9 December 2019, there are 61 active dengue clusters. The Jurong West Street 61 cluster with 75 cases has closed and is under surveillance; however there are a few smaller clusters in the vicinity, and residents are advised to continue to be alert to the threat of dengue. There are still other large clusters located at Choa Chu Kang Ave 2, Elias Rd, Begonia Dr, Jln Bangau and Bt Mugliston. Residents and stakeholders must take proactive dengue prevention measures in dengue clusters, to prevent further increase in cases.

The adult *Aedes aegypti* mosquito population, determined by the Gravitraps deployed by NEA, has increased by 32% in October, compared to in September. Notably, NEA has also observed a 55% increase in the rate of detection of *Aedes aegypti* larval habitats found in homes in October, compared to in September.

NEA encourages everyone to help break the disease transmission cycle, and protect themselves and their loved ones, by:

1. Immediately and regularly removing stagnant water in their homes and surroundings. Those living in landed properties should pay particular attention to any stagnant water inside their houses and in their gardens.
2. Check the NEA website for areas with relatively higher adult *Aedes aegypti* mosquito population, and take proactive mosquito prevention measures.
3. Those planning to go on vacation should mosquito-proof their homes before they travel, and bring along and apply insect repellent while travelling.
4. Persons infected with dengue should protect themselves from further mosquito bites, by applying mosquito repellent regularly. If you or your family members are unwell and showing symptoms suggestive of dengue, you are advised to seek medical attention immediately.

NEA urges everyone to use the information and resources below, to take proactive mosquito prevention measures to prevent the spread of dengue. The latest updates on the dengue situation can be found on the NEA website, NEA Stop Dengue Now Facebook page, and myENV app.
