Dengue Cases

It is important to note that the day-to-day numbers fluctuate, as they depend on the number of cases notified each day. Therefore, weekly numbers are a better reflection of actual trends.

Number of Reported Cases

26-Oct	27-Oct	28-Oct	29-Oct	30-Oct	31-Oct	01-Nov at 3pm
28	27	36	55	64	46	29

Number of Reported Cases by E-week (from Sun 0000hrs to Sat 2359hrs)

E-week 38 (15-21Sep19)	E-week 39 (22-28Sep19)	E-week 40 (29Sep-05Oct19)	E-week 41 (06-12Oct19)	E-week 42 (13-19Oct19)	E-week 43 (20-26Oct19)	E-week 44 (27Oct-01Nov19 at 3pm)
301	261	246	228	239	242	257

Cumulative No. of cases for 2019 (First 43 E-weeks): 13320

Compiled by Communicable Diseases Division, Ministry of Health

A total of 13,320 dengue cases have been reported this year (as of 26 October 2019). 242 cases were reported in E-week 43, an increase of 3 cases over the 239 cases seen in the previous E-week. Vigilance must be maintained, as historical data shows the possibility of another rise in the *Aedes aegypti* mosquito population at the end of the year. Between January and September this year, about 60% of all mosquito breeding habitats detected were found in residential premises, with the percentage found in residential premises at dengue cluster areas even higher at around 70%. If left unchecked, the mosquito population rise could once again increase the risk of dengue transmission.
